

The new way to leverage data for drug launches

About Cellbyte

Cellbyte is an **AI-driven copilot** designed for **Pricing & Market Access (P&MA)** teams in the pharmaceutical industry. Our platform enables users to perform complex **data analyses** on clinical, regulatory, HTA (Health Technology Assessment), and pricing-related data, and **extract deep insights** from industry documents—all through **natural language** queries. Backed by Y Combinator and prominent institutional investors, we are transforming drug launch strategies by drastically reducing research time. The founders Daniel, Felix and Samuel are experienced in both pharma and AI startups and are now looking for talented individuals to join this exciting journey.

Objectives

Work directly with the founders to drive Cellbyte's growth by **enhancing and expanding the data foundation** that powers our LLM-enabled platform. You'll play a key role in **building high-quality, granular pharmaceutical databases** that support LLM performance and user interactions. Examples include creating comprehensive price and HTA databases for major European markets such as Germany, France, Italy, Spain or U.K., all aimed at delivering cutting-edge insights for our customers.

Tasks

- Design and implement **relational and non-relational databases**
- Build **automated extraction pipelines** for pharma documents and databases
- Ensure **high data quality** by implementing data validation and cleaning processes
- Develop **data extraction systems** from complex HTA and pricing documents
- Collaborate on the **integration of databases** into our platform and LLM

Profile

- Fluent in **German or English**
- Motivated to gain experience in a fast-paced **startup environment**
- Proficient in **Python** with a strong understanding of **database management**
- Experienced with **LLM frameworks** such as OpenAI, Langchain, or LLamaIndex
- Knowledge in **RAG models** and web scraping/crawling is a plus

Contact

Please get in touch - we would be happy to hear from you!
